# **Version Description Document for**

## **Remote Access Version 1.0.0.2P1 (Solaris 2.5.1)**

### **1. System Overview**

The Remote Access Segment consists of two applications for use in connecting remotely located workstations with LAN. This segment is designed to operate on SPARC® computer running Solaris™ Version 2.5.1 on both the LAN servers and on the remotely located workstations. The remote connection is through the use of telephone modems, encryption devices and a terminal server at the LAN. This segment provides a tool to configure and setup the Cisco 2511 terminal server. This segment also provides a set of tools to reconfigure a remotely located workstation from one using an ethernet connection to one using a PPP connection, in the event that the ethernet connection goes down.

### **2. Referenced Documents**

The following documents are referenced in this VDD: none

### **3. Version Description**

#### **3.1 Inventory of Materials Released**

- Magnetic Media: Two 8mm tapes consisting of a relative tar of DII COE Remote Access, Version 1.0.0.2P1 (Sun SPARC Solaris 2.5.1)
- Soft-copy Documentation: One 3.5" floppy diskette containing the following documents for DII COE Remote Access Version 1.0.0.2P1 for Solaris 2.5.1:
  - Delivery Letter (WordPerfect 6.1)
  - Version Description Document (Word 6.0)
- Hard-copy Documentation: Two hard copies of an Application Delivery Checklist, SegDescrip files, and the aforementioned documentation.

#### **3.2 Software Changes**

1.0.0.2P1 (12/9/97):  
Update group IDs.

1.0.0.2 (6/14/97):  
The Remote Access segment was modified to include Solaris packages that are not included in the Solaris "End User System Support" installation.

Version 1.0.0.1 (2/21/97):  
Initial release.

The EM Client mode that was present in GCCS 2.0 Remote Access is no longer supported.

#### **4. Installation Instructions**

Use the segment installer to load version 1.0.0.2 followed by version 1.0.0.2P1.

#### **5. Known Problems and Errors**

None.
